

Paz Menachem

SOFTWARE ENGINEER

Israel | +972-53-270-3667 | paz.menach@gmail.com | linkedin.com/in/paz-menachem | github.com/pazMenachem

PROFILE

Software engineer with a B.Sc. in Computer Science, currently building and shipping internal production systems at an 80-person SaaS company. Two platforms in daily use, one of them company-wide, both built end to end in TypeScript on Firestore and Cloud Run. A security engineering background means authentication, access control and secrets get designed in rather than bolted on. Comfortable at the low level too: C, C++ and Linux kernel work.

EXPERIENCE

IT & Security Engineer — Copyleaks

01/2026 – Present

- Sole IT and security engineer for an 80-person SaaS company, reporting to the CISO. Ship internal production software alongside the security remit.
- Built and shipped the HR performance-review platform end to end, now used by all 80 employees: Next.js front end, Fastify API, Firestore, deployed on Cloud Run, with Keycloak OIDC authentication, role-based access control and private file storage.
 - Built Manage-IT, used daily by the IT and security team: integrates two MDM APIs and the company IdP to keep device inventory and the employee directory in sync, and runs repeatable procedures as tracked checklists. Next.js, TypeScript, Firestore.
 - Automate operational workflows in Python, Bash and n8n across cloud, identity and endpoint systems.
 - Own the security stack day to day: Elastic SIEM, CrowdStrike EDR, GCP and Oracle Cloud IAM, firewall and network policy, and the technical evidence work for the SOC 2 Type II audit.

Teaching Assistant & Mentor — Excellence team / Start-Up Nation Central

03/2025 – 08/2025

Invited back after completing the bootcamp: graded student exercises for a full semester, then mentored teams on projects sponsored by NVIDIA, Google and Check Point.

Programming Teacher — Magshimim, Israel Cyber Campus

2022 – 2024

Taught C++ to 11th graders and computer networks to 10th graders; mentored 40+ students toward elite IDF cyber units, two thirds of them accepted.

PROJECTS

- JobHunter** — Automated job-search pipeline in Python: crawls listings, filters them with an LLM, pushes matches to Telegram or email. Provider-based architecture with factories for the LLM and notification layers, separate data models, Dockerised, scheduled runs.
- My_Internet** — Linux kernel module in C filtering domains and ad traffic at the packet level, with a Python management interface and SQLite store.
- Trivia Game** — Multithreaded C++ socket server with a request-handler factory, custom protocol and SQLite persistence, paired with a C# WinForms client.

EDUCATION

B.Sc. Computer Science, Tel-Hai Academic College — 2024. Average 85. Red Hat Beyond course: built a Django application in a team of five under Red Hat mentorship.

Excellence team Software Development Bootcamp, Start-Up Nation Central — 08/2024. Worked with mentors from the Israeli tech industry on software architecture and problem solving.

TECHNICAL SKILLS

- Languages:** Python, TypeScript, C, C++, C#, Bash, PowerShell, SQL
- Backend & data:** Next.js, Fastify, Node.js, Django, REST APIs, Firestore, PostgreSQL, SQLite, multithreading, socket programming
- Infrastructure:** Docker, Terraform, Cloud Run, GCP, Oracle Cloud, CI/CD, Linux, Git; Kubernetes (theoretical)
- AI tooling:** Claude Agent SDK, MCP, LLM integration, n8n
- Security:** Least-privilege access design, OIDC, SAML, SSO, MFA, Keycloak, Elastic SIEM, CrowdStrike EDR, SOC 2 Type II

MILITARY SERVICE & VOLUNTEERING

- Combat Soldier, Armored Corps, 7th Brigade — 2013–2016
- Rabin Pre-Army Preparatory Program — 2012–2013
- AKIM, support for people with intellectual disabilities — 2009–2012

LANGUAGES

Hebrew — native | English — fluent
